Now from Don Dion, whose Fidelity Select Sector Portfolio has returned 261% in just over 10 years…

Is This the Greatest Market Discovery Ever Made?

These 2 investment "secrets" can help you earn double the return of the S&P 500 or more … with far less risk … and turn a $100,000 portfolio into a half million dollar windfall within a decade.

Members who followed our advice have already used these secrets to outperform the S&P 500 by 100%. Now we're getting set to double our money in short order once again….

Dear Investor:

I'm not exaggerating when I say it may be "the greatest market discovery ever made."

The "discovery" is not one but *two* market "secrets."

I say "secrets" because they may be a secret to you … but they are routinely used by professional money managers to make small fortunes for their clients.

Both of these secrets are undisputed laws that strictly govern the performance of financial markets.

Both of these principles have been proven beyond a shadow of a doubt – through rigorous quantitative research, which I'll detail in a minute – to outperform the broad markets.

Already, members who followed our recommendations are up 35% – more than double what the S&P 500 earned during the same period … just by applying these simple secrets.

In this report, I'm going to reveal what these 2 market discoveries are … why they work like gangbusters … and how we use them to make safe, handsome profits while sleeping soundly at night.

Plus, I'm going to share with you a powerful new investment vehicle that's ideal for building a conservative yet profitable portfolio based on our system.

It's an attractively priced, alternative asset class that lets you profit handsomely from our two market secrets – at a small fraction of the risk (and cost) of trading individual stocks on these same market signals.

Market discovery #1:

The "hidden market" within the market.

You already know the bad news in the market: in 2005, the S&P 500 returned a modest 3.86% gain.

That means if you started with a $100,000 portfolio at the beginning of the year, you ended with $103,860.

But the S&P 500 isn't the only place you can buy and sell equities … not by a long shot.

And by trading these "hidden markets," you could have pocketed profits that made the S&P 500 look anemic by comparison.

In one of these markets, buoyed by rising oil prices, investors made a 45.53% gain in 2005 … **outperforming the S&P 500 by nearly 12 to 1.**

On a $100,000 portfolio, you'd have earned a hefty $45,530 in profits before commissions.

What are these "hidden markets" I'm talking about? Stock market *sectors.*

When most investors think of stocks, they think of investing in the S&P 500 or the Dow or the NASDAQ … or some other broad index.

But the market is *much* more segmented than that.

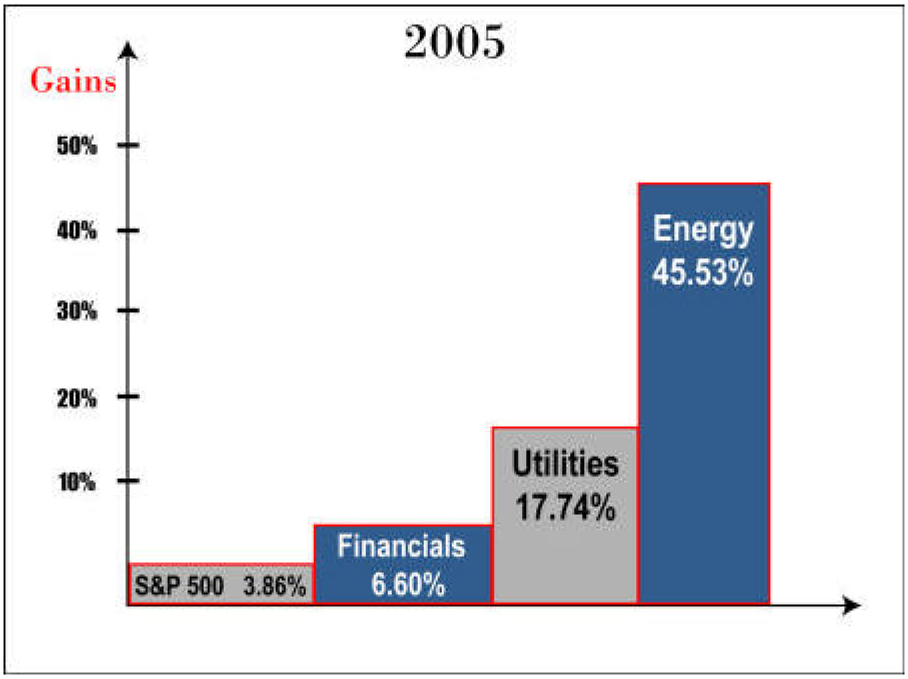
You see, the thousands of publicly traded stocks can be logically grouped according to more than a dozen specific sectors:

Energy … utilities … transportation … telecommunications … health care … natural resources … industrials … consumer staples … financial services … materials … semiconductors … real estate … gold … biotechnology … natural gas … software … to name just a few.

These specific sectors do *not* all move in synch with the broad market. In fact, the opposite is often true….

At any given time, a sector or "hidden market" can outperform the broad market by a factor of 2 … 5 … even 10 times or more!

Take a look at the performance of several sectors in 2005, shown in the graph below:



As you can see, the energy sector returned a 45.53% gain in 2005 – generating nearly 12 times the return of the S&P 500 for the same period.

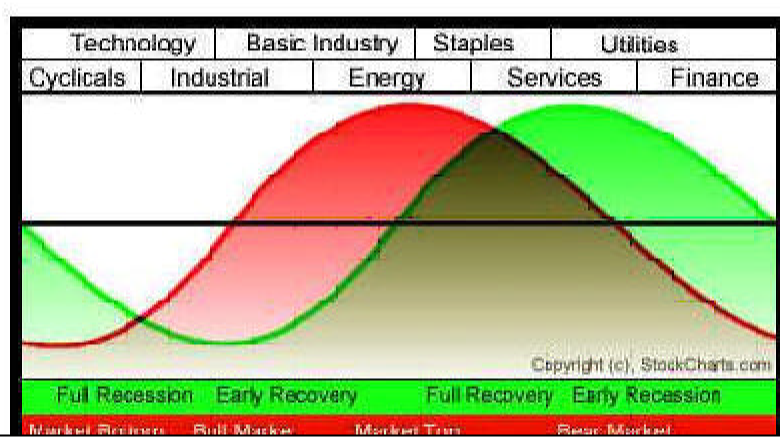
The utility sector returned less than half the gains of the energy sector – but still more than 4 times the S&P 500.

Of course, you know that with oil prices in the news nearly every week, the energy sector has been red-hot lately.

But does that mean you simply have to move your portfolio to the energy sector – and you'll be set for the rest of the year?

Unfortunately, not … because, as shown in the graph below, sector performance is dynamic and cyclical, not static, and constantly changes over time:

That means by picking the top-performing "hidden markets" – those sectors earning the greatest returns *right now*, and not last month or even last week – you and I can make much more money than investors who earn "average" market returns.



In 2003, for instance, energy returned a decent enough 23.22% gain. But the top-performing sector was high-tech, which generated a 37.19% return for the year, bouncing back after the crash of 2000 triggered a 3-year bear market in technology stocks.

So if you are in the right sector or "market," you can make many times more money than people who have their money in the wrong sectors – or the broad market.

But sector investing, by itself, isn't going to help you double or triple the broad markets on a consistent basis.

For that, you need my *second* great stock market discovery....

Market discovery #2:

The supremacy of price movement.

"Price movement," or momentum, refers to the direction a stock price or market is headed.

Momentum measures the amount that a stock's share price or market has changed over a given time.

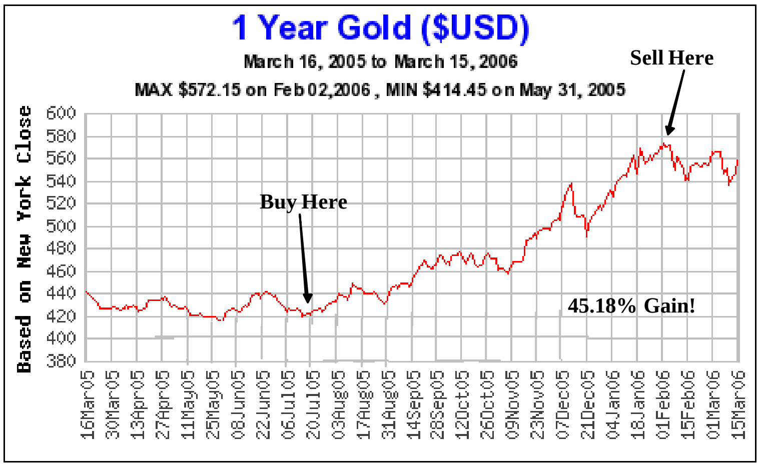
There are all sorts of technical indicators traders use to pick stocks. But the purest – and most accurate – indicator of all is price.

The price of a stock is the key indicator of how the market values that particular company.

And by using momentum trading to identify those companies or markets whose prices are rising, we can pick more winners, more often ... and multiply our profits.

For instance, in the summer of 2005, our proprietary momentum tracking sector showed that gold prices were rapidly moving upward.

We bought a position in the gold sector in July 2005, and when the chart said it was time to sell in February 2006, we did – locking in a 45.18% gain in 7 months (see chart below).



And on January 18, 2006 we bought the iShares GS Networking ETF, an exchange traded fund covering the computer networking sector. On March 1, 2006 we sold our position, locking in gain of 5.75% in 42 days for an annualized gain of 50%.

A study by Jegadeesh and Titman at Emory's Goizueta Business School confirms the incredible power and accuracy of *momentum trading*:

"There is substantial evidence that stocks that perform the best over a 3 to 12-month period tend to continue to perform well over the subsequent 3 to 12 months. Momentum trading strategies that exploit this phenomenon have been consistently profitable in the United States and in most developed markets. Similarly, stocks with high earnings momentum outperform stocks with low earnings momentum."

No wonder my proprietary Momentum Tracking System consistently delivers greater profits than the S&P 500 … with far less risk.

Sectors + momentum = a fail-safe system for beating the market!

By combining sector investing with momentum trading, my new trading service, ***ETF Momentum Tracker***, enables us to always be invested in sectors (markets) headed higher.

It doesn't matter whether the Dow is bullish, bearish, or flat….

There is almost always one or more sectors whose performance is far outstripping the broad markets.

And with ***ETF Momentum Tracker***, that's exactly where we put our money – by owning, at all times, a portfolio of the top 5 markets as selected by my momentum tracking system.

The ONLY criteria we use for selection is that we invest in the five market sectors that have the highest *difference* between their 3 and 7-week moving averages. In other words, the greatest upward price momentum.

Why 3 and 7 weeks? Because it's *long* enough that we can prove it works through back-testing … yet *short* enough to ensure we always have the best-performing picks in our portfolio – and don't hold investments that are starting to head downward.

This sector momentum strategy has paid off handsomely for our members … doubling the returns of the S&P 500 since we started using it.

Now, to the casual observer, we're not exactly setting the world on fire – our average gain is a teeny 2.3% per trade.

But WAIT!

Before you start yawning and click away from this page – and this is VERY important to your wealth – keep in mind that we earn that 2.3% on average in just 51 days per trade.

When you make relatively quick gains like that, you don't have to worry about hitting doubles … or anything even close to that.

Instead, you can "get rich slowly" … and conservatively … and carefully.

How rich?

Well, if you invested $100,000 today, earned 2.3% every 51 days, and then re-invested all your profits …

… your portfolio would grow to **$502,539** before commissions within 10 years. In just a decade, you'd have more than half a million bucks in your account!

When you look at annualized gains, you can see that so many of our trades trounce the Dow, S&P 500, Nasdaq, and other major market indices.

Including:

- Software, 81.5% annualized gain.
- Gold, 71.3% annualized gain.
- Transportation, 22.5% annualized gain.
- Medical, 56.5% annualized gain.
- Defense, 33.1% annualized gain.
- Utilities, 66.1% annualized gain.

- Energy, 34.5% annualized gain.
- Resources, 58.1% annualized gain.
- Wireless, 65.4% annualized gain.
- Natural gas, 32.7% annualized gain.
- Insurance, 44.9% annualized gain.

And here's the best part: we do it with the same low-risk, diversified approach that I've used to make a fortune – safely and conservatively – in mutual funds instead of stocks.

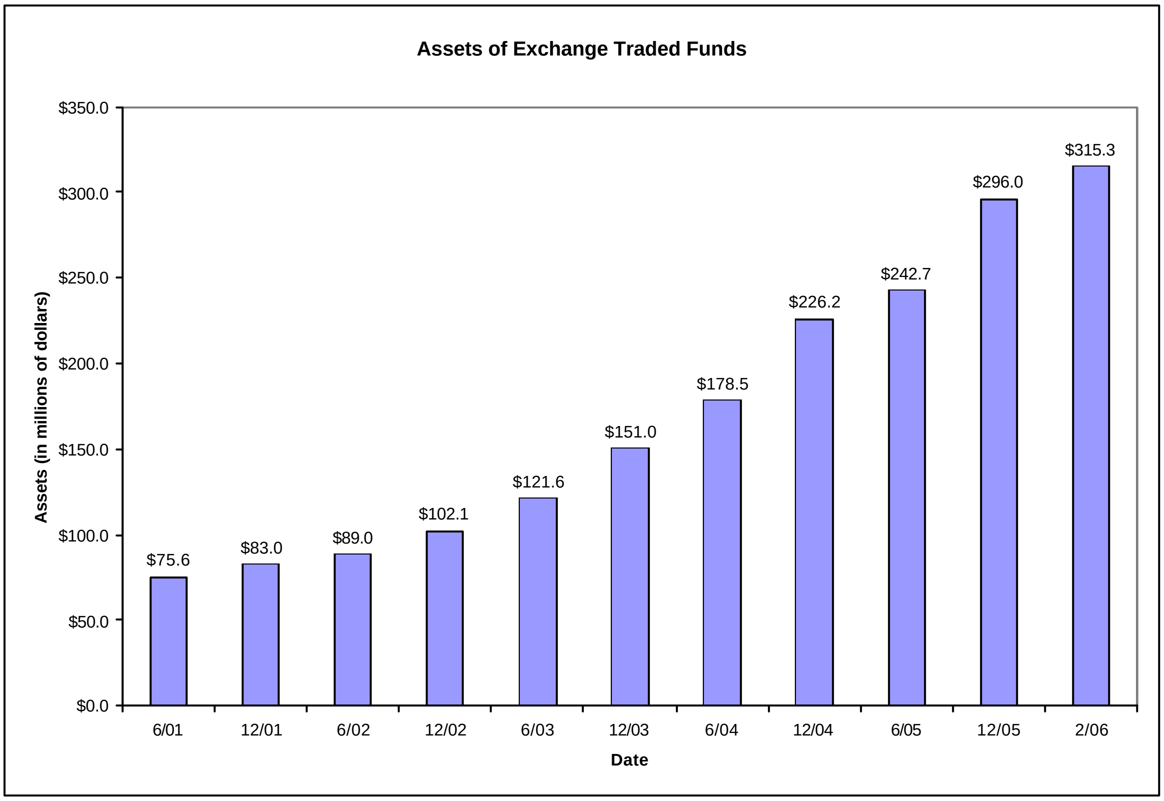
Cut your risk with safe, low-cost ETFs

In my new advisory service, ***ETF Momentum Tracker***, we never trade individual stocks.

Instead, we use momentum tracking to trade the "hot" sectors of the day … by owning the Exchange Traded Funds (ETFs) that cover those sectors.

ETF Momentum Tracker is the ONLY ETF trading service that selects the best-performing ETFs using my quantitative momentum discipline – meaning we hold in our portfolios only those ETFs that are heading higher, faster.

Exchange Traded Funds, a relatively new investment vehicle introduced in the early 1990s, are now exploding in popularity (see graph below):



In 2005, investors poured a total of $147.5 billion into all equity funds combined, with more than half – $96.4 billion – going to ETFs.

That's not surprising when you consider all the advantages ETFs give you over stocks and even conventional mutual funds:

- You can sell ETFs short to profit from falling stock prices. Unlike individual stocks, ETFs are exempt from the uptick rule.
- ETFs can be bought and sold instantaneously on major stock exchanges vs. mutual funds which trade at end-of-day prices. You can buy and sell ETFs all day, even after the stock exchange has closed. That means you're in control of your entry and exit price all day long.
- You can choose from more than 100 ETFs to track virtually any index in the world, from the NASDAQ to the Malaysian stock market.
- ETF's have a favorable tax profile because you do not suffer capital gains distributions when your fellow investors sell shares. Reason: the underlying stocks are traded, not sold.
- You can trade ETFs with stop-loss orders, sharply limiting your downside risk.
- Annual management fees and expenses are extremely modest compared to most mutual funds. There are no 12-b-1 fees, sales loads, or exit charges.

- There are no investment minimums. You can take as large or small a position as you like – even a single share.
- You can leverage your ETF trades by buying on margins, just like with individual stocks – giving you the potential for enormous gains.

And remember, the "F" in ETF stands for "fund." And as *funds*, ETFs give you far greater diversification than owning individual stocks.

For instance, you could buy an individual oil company to take advantage of a bull market in energy.

But if that particular company catches a bad break – say, its promising new test wells all come up dry – its shares can plummet. And you can lose everything you invested.

But an Exchange Traded Fund focusing on energy might own dozens of oil and gas stocks. So even if one takes a nosedive because of some bad news, it represents just a tiny fraction of the fund's total energy portfolio, sharply limiting your downside risk.

ETF Momentum Tracker tracks the momentum and performance of 26 U.S. and 29 foreign ETFs, all of which are from iShares, the biggest ETF producer. In 2005, investors put $45 billion in assets into iShares.

About Don Dion Jr.

Even though he's a multi-millionaire, Don Dion Jr. shops at the local supermarket, drives a GMC truck instead of a Ferrari, and doesn't hobnob with the rich and famous.

But that's good news for you, because Don is as conservative as you are. He avoids the high-flying tech and oil stocks, and has built

Saves $18,389 on commissions

Regular mutual funds often come with hefty management fees – anywhere from 1% to 1.5% or even higher.

Over time, that can cost you a pretty penny. For instance, if you have $100,000 invested in a mutual fund earning 10% annualized returns and charging a 1% fee, your investment would be worth $234,573 after 10 years.

ETFs typically have lower management fees, ranging anywhere from as little as 15 basis points to as high as 75 basis points (0.75%).

If you had invested that $100,000 in an ETF earning a 10% annualized return, and the management fee was only 25 basis points, your investment would be worth $252,962 after 10 years.

The bottom line: the ETF's lower management fees would have put an extra $18,389 in your pocket –

his fortune slowly and safely – through owning mutual funds.

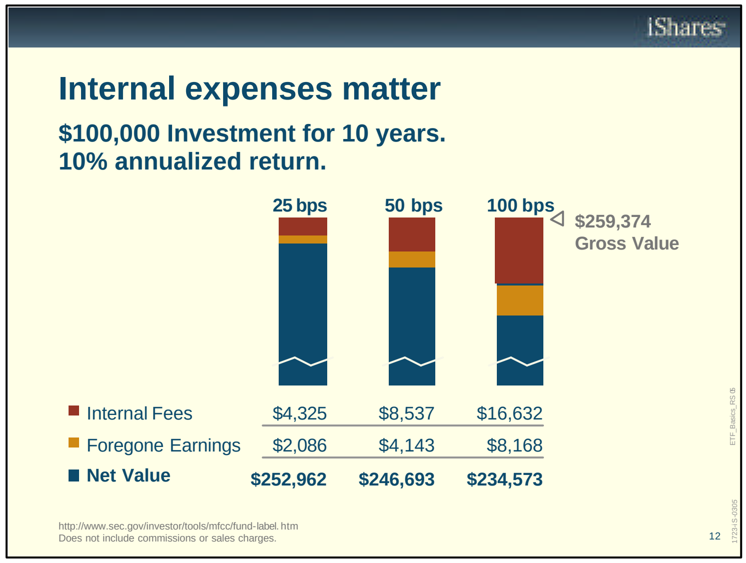
As the editor-in-chief of *Fidelity Independent Adviser (FIA)*, his Fidelity Sector Portfolio has returned 261% in just over 10 years. The largest Fidelity-specific newsletter in the country, *FIA* is read by more than 50,000 subscribers with approximately $220 billion in investable assets.

As the chief investment officer for Dion Money Management, Don is responsible for the management of more than $800 million in client assets. He has been quoted in the *New York Times, Wall Street Journal*, and *Barron's,* and has appeared on CNN and CNBC.

Whether it's an individual company or a mutual fund, Don's training as an attorney and CPA enable him to perform "due diligence" on the investments he recommends at a level most other advisors cannot duplicate.

Don holds a JD from the University of Maine School of Law and an LLM in taxation from the Boston University School of Law, and is licensed as an attorney in Massachusetts and Maine. He is also a registered investment

even if both investments generated the identical rate of return:



A study from PriceWaterhouseCooper found that indexing saved investors $14 billion to $18 billion annually in management fees.

The $800 million money manager you can "hire" for just 68 cents a day.

Thousands of investors rely on Don Dion to guide their investments … and he currently has more than $800 million under management.

Were you to hire Don Dion as your money manager, you'd need a minimum investment of $250,000 – and on an account that size, the 2% management fee would mean you'd be paying Don $5,000 a year for his advice.

That's a bargain, when you consider that his Fidelity Select Sector Portfolio found in Don's monthly newsletter returned 261% in just over 10 years – turning an initial $100,000 investment into a $361,000 windfall.

But when you become an ***ETF Momentum Tracker*** subscriber, you get all of Don Dion's ETF sector trades, made using his proprietary momentum tracking system, all year long.

The regular rate for a 1-year subscription is $599. But sign up now as a no-risk charter subscriber, and you pay just $299 – a savings of $300.

adviser representative licensed in Massachusetts and Florida, having passed both the NASD Series 7 and Series 65 exams.

Don has more than a quarter century of experience in the stock market. In 1992, he took a company he founded, Litchfield Financial Corporation, public for $183 million. His book, *Dion on Vanguard,* is published by Pegasus Press.

He divides his time between homes in Naples, Florida and Williamstown, Massachusetts. In addition to being a top investment advisor, Don is a pretty good golfer, with a four handicap.

Or for an even better deal, choose a 2-year charter

subscription. Same no-risk, money-back guarantee of satisfaction. And the cost? Only $499 ... about 68 cents a day. That's nearly $700 off the list price of $1,198.

And just look at all you get for your 68 cents a day:

Don Dion's ETF Momentum Tracker ... every week you get online delivery of an 11-page newsletter that gives you everything you need to invest in safe, profitable ETFs using Don Dion's proprietary momentum tracking system.

Don Dion's Outlook ... in every weekly issue, Don gives you his analysis into the market for that week. It's fascinating reading. And Don's sharp, on-target market insights can help you maximize profits and prevent losses in all your portfolios.

ETF Momentum Tracker Ranking ... ranks the 55 U.S. and international ETFs we track by using the relative strength for the previous 15 days minus the relative strength for the previous 35 days. The higher the resulting number, the greater the momentum. Our ETF rankings enable you to position your portfolio in the sectors that are doing best today, while avoiding the worst-performing sectors.

Current Portfolio holdings ... gives you the name, symbol, and gain-to-date of the 5 ETFs in our portfolio. Also compares our portfolio performance with the S&P 500, Dow, Nasdaq, and Russell 2000 so you can see how you're doing relative to the broad markets.

This Week's Trade Recommendations ...tells you what ETFs Don wants you to buy as well as when it's time to sell, locking in your profits on these trades. Simple instructions make trading the system easy – literally takes just a few minutes a week!

Featured Fund ... Don's research recommendations on a hot sector – and the ETF he recommends for trading it.

Hotline Reports ... you get e-mails between weekly issues alerting you when there is an action to take – or important news you need to know.

4 FREE Gifts for you!

Subscribe risk-free to Don Dion's ***ETF Momentum Tracker*** today and you get up to 4 FREE Bonus Reports to help you make more money momentum-trading sectors with ultra-safe, conservative ETFs:

- ***FREE Bonus Report #1:*** *Winning with ETFs …*a primer for new subscribers on how ETFs work and why they're an ideal instrument for conservative investors looking to safely profit from major sector trends.

- ***FREE Bonus Report #2:*** *The ETF Momentum System …* a fascinating look at why momentum trading is so accurate at predicting rising and falling markets – and how Don Dion's proprietary momentum tracker works.

- ***FREE Bonus Report #3:*** *Profiting from International ETFs …*we've just added a new international portfolio with 29 foreign ETFs. Now you can profit from bull markets around the world – and this special report shows you the ropes about trading global markets through ETFs.

- ***FREE Bonus Report #4:*** *Don Dion's #1 ETF …*you can immediately download the #1 ETF Don is recommending today.

Everybody talks about how the Chinese are going to take over the world – but Don isn't buying into China today. In his *#1 ETF* report, Don Dion shows you the Asian market he IS buying … and the best ETF for investing in its growing economy.

This often overlooked Asian nation is in the midst of a strong economic recovery. After a crash in 1989, the nation entered a 14-year bear market, during which its stock market lost 80% of its value. But it has already rebounded nicely from its 2003 low of 7,603, and retracement indicates a target of 19,376.

Gross domestic product has been trending upward as a result of more robust export expansion. Personal income remains healthy, and consumer confidence has recovered sharply as the job market shows signs of firming. Foreign investors are flocking to buy shares of companies in this country, because valuations are low despite improving profitability.

"Kick the tires" on the *ETF Momentum Tracker* system risk-free for a full month. Then decide.

If you reply today, I'll give you a **30-day risk-free trial** of Don Dion's ***ETF Momentum Tracker.***

That way, there's no commitment or obligation of any kind.

You can just read your weekly issues to learn more about the market and Don's incredibly successful momentum tracker … or even paper-trade right along with him.

Then, if you decide that ETFs are not for you … or don't want to continue with our service for any other reason (or for no reason at all) … just let us know within 30 days.

We will give you a full and prompt refund of your entire subscription fee – no questions asked.

Whatever you decide, all issues and bonus materials received are yours to keep … our way of saying “thanks” for giving ***ETF Momentum Tracker*** a fair try.

A needle in a haystack?

So what are you waiting for? Stop trying to analyze thousands of different companies to find that “needle in a haystack” – the one stock that’s actually going to skyrocket while hundreds of others fizzle.

With my ***ETF Momentum Tracker***, we use the world’s most reliable and accurate indicator – price and its momentum – to let the market tell us which sectors are going to climb higher … and which will sink like a stone.

And by investing in those sectors with exchange traded funds instead of individual stocks, we dramatically lower our risk – and profit from broad, predictable market trends … not the fortunes of any one company.

To become a Charter Subscriber to ***ETF Momentum Tracker*** on a no-risk 30-day trial basis, call us toll-free at **800-548-3797**. Or click below now:
