# WARNING!

## Your 2005 NEC and Handbook are now out-of-date. Get the updated 2011 Editions today for 15% off!

Dear John Q. Sample,

Time flies. For example....

The new 2011 NEC® and NEC Handbook have been out since September.

But our records show you don't own the new editions.

That means you're working from your 2005 NEC or Handbook.

Those 2005 editions...and the requirements they contain...are rapidly becoming dated.

Hundreds of changes have been reflected in the new editions.

As an electrical professional, you know it's important to keep up with the latest developments in electrical installations and codes.

Now you can replace your old 2005 NEC or Handbook with brand new and completely up-to-date 2011 editions—at significant savings.

And you should, because the Code and Handbook are radically different from when they were published in 2005. As an article in the November 2010 issue of the electrical industry's resource EC&M magazine explains:

“The steady introduction of new products and technologies into the marketplace—coupled with the release of new research findings—creates a seemingly never-ending flow of necessary revisions (some of which are comprehensive) to this widely accepted electrical code.”

The National Electrical Code® isn't static. It's dynamic...and constantly evolving. One of your challenges as an electrical professional is to keep current with the Code and understand how to apply it to your installations.

That's where the 2011 NEC and 2011 NEC Handbook come in.

Here are just a few sections of the Code that have been revised and updated for the new 2011 edition:

- > 110.24 Available Fault Current—some equipment must be marked with the available fault current and requires updating of that marking if modifications of the electrical system occur.
- > 210.8 GFCI Protection—a new requirement states that the ground-fault circuit-interrupter device must be installed at a readily accessible location.
- > 210.12 Arc-Fault Circuit Interrupter Protection for Residences—changes in requirements permitting for outlet type AFCI protection as well as changes in requirements for branch circuit extensions.

The 2011 *NEC*® also covers changes to the sections on conductor installation...neutral conductors... cable trays...grounding electrodes...electrical conductivity of metal raceways...outlet boxes...bushings... receptacle cover plates...motor terminal housings...over-current protection...optical fiber cables...primary protector grounding and bonding...ratings for individual motor circuits...load calculations for service conductors...and dozens more.

“The *NEC* is truly everybody’s Code,” says NFPA member Donald Cook, Chief Electrical Inspector, Shelby County Developmental Services Department. “The *NEC* sets up a minimum basis for safety, and it reacts to the latest knowledge. If the general public understood how the latest *NEC* protects us all from electrical hazards, people would insist on it.”

“We’re trying to accommodate a significant amount of electrical use in this country as well as growing in other countries. The 2011 NEC has the ability to make sure that

we carry forward in newer technologies such as solar or wind, and also to ensure that people can interact with these systems in a safe manner. Commentary in the 2011 NEC Handbook provides the opportunity to connect you between the Code text and what you would see in a real-life installation.”
