

All the safeguards you need in an increasingly threatening world

CULPER SERVICES

The single source for all your security and safety needs

**World-Class Protection. For World-Class People.
All Across the Globe.**

HIGH-END SOLUTIONS

Culper Risk integrates best-in-class technology, equipment, and services to build high-end solutions that meet your total security needs. *Including...*

Cyber Security

At both your homes and your businesses, facility-critical infrastructure is especially vulnerable to cyber attack. By applying best-practice cyber security frameworks, Culper Risk can help you understand, control, and mitigate cyber threats. Our proven digital security protocols enable you to prioritize countermeasures and identify the resources you need to defend against today's swiftest and most sophisticated attacks. Culper Risk can provide these cyber security services either as a stand-alone, or integrated into Culper's Dynamic Risk Assessment.

Alarm Systems

Our advanced analytic AI-driven alarm and surveillance systems are leading brands and fully compliant with the National Defense Authorization Act (NDAA). Alarms signal an alert only when an event hits or exceeds a pre-set security threshold which prevents false alarms.

Video Surveillance

All video equipment is AI networked, event-driven, and monitored by a 24/7 Security Operations Center (SOC), staffed by proactive security professionals. Should a security issue present itself, SOC personnel initiate a 911 call, alert the client, and coordinate an optimal response. The situation is rendered safe and secure, and normal operating procedures are swiftly restored.

Perimeter Security

Culper Risk perimeter security solutions include remote monitoring, 24/7 SOC, video surveillance, event-driven alarms, intrusion detection, vehicle and personal barriers, access control systems, visual deterrents, and other perimeter hardening measures. The technology allows us to “see out” and get predictive before the situation escalates. System *talk-down* capability enables SOC personnel to communicate remotely with intruders over an intercom. SOC informs the bad actors that they are being monitored and that law enforcement has been dispatched—and also orders the perpetrators to leave the premises immediately.

Intelligence Reporting

The Culper team coordinates, vets, and interprets intelligence data gathered from the best available sources worldwide. Expert analysis yields the most up-to-date and accurate INTEL threat reporting. So you are fully informed and kept current on the nature, severity, and urgency of every risk. These include threats from bad actors as well as weather and environmental hazards anywhere in the world. Real-time intelligence updates can be sent directly to user and security personnel mobile devices.

Escape Plans and Evacuation Assistance

Whether from natural disasters, civil unrest, or threat escalation, Culper Risk provides tactical counter-measures and proven contingencies. These quickly and rapidly get you out of harm’s way and relocate you to a safer location.

Personal Protection and Guarding

Culper employs teams of highly trained former police officers, special operators, and other security professionals—armed and unarmed. That way, you always get the right protection, whatever the scenario.

Dedicated Drivers

Both internationally and at home, you can feel safe that your driver is not an “unknown,” as Uber and taxi drivers have been responsible for multiple kidnappings and ransom attacks. But Culper’s professional drivers are a known entity. Our experts have in-depth understanding of local threats, best routes, and the environment. Your transportation security is further enhanced with bullet-resistant windshields, windows, and auto bodies ... car-bomb detection and disarming ... and route mapping and tracking.

Kidnap, Ransom, and Release Services

Pre, during, and post services ensure full protection. Our deep knowledge and cutting-edge technology help us to prevent kidnappings. Should a kidnapping already have occurred, we have the ability to locate and track the victims, and can also dispatch a professional negotiator. Kidnap insurance for high-net-worth individuals assures rapid availability of sufficient ransom funds as needed. Extensive local knowledge, connections, and experience enable us to swiftly and smoothly get the victims released no matter what the situation—or where it is taking place.

Internal Security and Resiliency

Offering our clients home, asset intrusion detection technology, internal fallback area plans, safe room construction, supply stockpile, and additional “off-grid” infrastructure. Also IT, cyber, and social media vulnerability assessment. Background checks, vetting, and monitoring of house staff and key personnel. Detection and removal of listening, bugging devices, and hidden camera monitoring. All making your home and your assets safer from any threat or environmental hazard.

**Culper Risk—Your singular resource for
staying safe in an unsafe world.**

World-Class Protection. For World-Class People. All Across the Globe.

Culper Risk is unique in that we exclusively service high-net-worth individuals, their families, their businesses, and their assets. An elite clientele for whom best-in-class safety, security, and stability are paramount.
