

Little-Known Company With The Solution to the Biggest Single Problem of Civilized World

Investors in similar companies – with *inferior* solutions – have already seen those stocks climb 156%, 160%, 210% and 214%. Now, aim for similar, or even better, returns!

Dear Reader:

A small U.S.-based company with a breakthrough technology is now ready to help overcome the depletion of Earth's most precious natural resource: water – clean, usable, H₂O.

Water is far more essential to our continued health and prosperity than any other natural resource on the planet. Yet few analysts on Wall Street understand the urgency of its growing scarcity – let alone the enormous profit opportunities for investors in the companies that can help solve it.

Already, stocks in other water technology companies, some with *inferior* solutions, have gone through the roof.

PICO, a company that develops water storage operations, is up 115% in 26 months. Badger Meter, a manufacturer of flow control devices, is up 121% in 15 months. Euro Tech, a distributor of water treatment equipment, has surged up 132% in 14 months.

Northwest Pipe, a manufacturer of welded steep pipe for water works, gained 210% in 26 months. And Aquadyne, a water purification systems and liquid waste remediation company, is up a whopping 214% in just 12 months!

Why? Because the people and governments of areas impacted by the world's water crisis are now so desperate, they are lavishing gushers of money on any company that promises to provide solutions.

Right now, over ONE BILLION people don't have access to clean, fresh, potable drinking water. Plus, more than a third of the world's population – over 2 billion people – live in countries with "water stress," where consumption exceeds available supplies of drinking water.

(over please)

In China, available water supplies are estimated to support 650 million people, only half of its 1.2 billion population. Among China's 617 cities, 300 cities face serious water shortages.

In the Middle East, three pivotal countries – Jordan, Israel, and Saudi Arabia – suffer chronic water shortages and are forced to import as much as 91% of their fresh water needs from other regions.

In Mexico, nine tenths of the land is high and dry, and the per-capita water supplies are less than half of the world average. Mexico City is sinking at the rate of nine centimeters per year because so much water is being sucked out from under it.

But the water crisis is not limited to emerging nations.

In Europe, for example, over 90% of the rivers have high nitrate concentrations, as much as 200 times more than unpolluted rivers. Over half of Europe's lakes are clogged with life-choking algae from agricultural and municipal drainage.

And right here at home – in the United States – groundwater is being used up at a rate 25% faster than it is being replenished.

A decade-long drought has parched the West, threatening drinking water supplies for major cities and irrigation for food production. U.S. Geological Survey scientists say that the western states are experiencing their worst drought in 500 years.

This crisis has sparked a massive spending spree, creating profit windfalls for companies with the right technology

All over the world, thirsty citizens are demanding action from their governments, and those governments are scrambling to find solutions.

The worldwide water crisis has reached critical mass, and thousands of federal and local governments around the world are fighting back, getting ready to spend billions of dollars to treat, conserve and distribute water.

New York City is already spending \$1 billion to conserve and protect upstate water catchment areas. That's where the Big Apple gets its drinking water.

In the UK, all businesses can claim a whopping 100% tax credit for capital allowances spent on plants and machinery that reduce water use and improve water quality.

A water industry conference this spring revealed that, in the U.S. alone, the water industry will grow by 7% per year to \$150 billion. The Environmental Protection Agency (EPA) estimates that we need to spend at least \$138 billion by 2016 just to meet the requirements of the Safe Drinking Water Act. And private sources say the EPA's figures are grossly underestimated.

Better yet: More and more cities are choosing to privatize their water supply systems, leading to contracts for vendor companies good for as long as 20 years – two decades of guaranteed revenue.

How This Little Water Technology Company Can Hand You a Gain of up to 325% Within the Next 24-36 Months

China, one of the nations hardest hit by the global water shortage, is also one of the most willing to spend lavishly for the best solutions.

China's water shortage is now so severe, the annual per-capita water supply is just one-fourth the global average. Over 700 million Chinese drink water fouled with animal and human waste exceeding the maximum permissible levels.

In Beijing and Shanghai, water tables are declining at the rate of 1.5 to 2 meters per year. Eight out of ten of China's major rivers are so polluted they no longer support fishing industries, let alone agriculture or drinkable water.

To come to the rescue, China is enticing foreign companies – not only to alleviate human suffering, but to keep its enormous economic engine humming. But they want only solid companies with the best technology.

The company I'm looking at has been around for 128 years. A company doesn't last that long unless it's doing something right.

((And it is the ONLY company in the world with the technology that meets the standards of China's new plumbing code. Every other competitor has FAILED to comply with the code!))

A Chinese water monopoly!

Result: This company has a near strangle-hold on a vast market of more than a billion thirsty Chinese who MUST have its water control technology.

The company already has two wholly owned subsidiaries and one joint venture in China. And now, China has pledged to spend an extra \$240 million this year on their water systems.))

The company's net income is projected to grow 33% this year, due largely to rapidly increasing revenues for its operations in China.

Reason: Its revenues from China are skyrocketing. At the same time, its costs are falling, since plants in China are much less expensive to build and maintain. So the boost to the company's bottom line – now and in the years ahead – is enormous.

(over please)

Why Wall Street Is Still in the Dark

Right now, Wall Street is still oblivious to the enormous profit potential this situation is offering up to investors. They don't understand the worldwide water crisis. They don't understand the situation in China. And they certainly don't know enough about water technology or the Chinese legal code to connect all the dots.

But as China's brewing water crisis comes to the forefront ... and when more analysts recognize how this company *already* is providing solutions, the company's shares should attract a lot of attention ... and soar even higher.

I give you all the details in my new special report, Triple-Digit Profits With World's Greatest Resource. In it, I tell you:

- * How management is actively expanding the company through acquisition, buying four companies with complementary technologies within the last 24 months.

- * Why the World Bank predicts that China's water crisis will soon become "unmanageable, with catastrophic consequences for future generations" ... and how this company will not only help avert the catastrophe, but will also make huge profits for its shareholders.

- * How emergency water measures in preparation for the 2008 Olympics in Beijing will accelerate China's spending on water technology, and how this company is positioning itself to be there to grab its share of the resulting profits.

- * How it can make even more money by helping China pump water in the largest construction project ever undertaken by mankind. On this project alone, spending could hit \$75 billion!

- * And more

The report sells for \$89, and you're welcome to buy it at that price. But it's yours FREE when you begin a no-risk trial subscription to my Real Wealth Report.

Learn How to Turn \$25,000 into \$57,750!

My Real Wealth Report has one single goal: To help you make tons of money in the one sector that's beating the pants off of almost any other investment in the world today: Natural resources like oil, gas, copper, gold, and now, WATER.

We made a 100% gain on BHP Billiton ... 57% on Questar ... 69% on Ionics ... 52% on Permian Basin Royalty Trust ... 76% on Evergreen Solar ... 39% on Knightsbridge Tanker ... 18% on Anadarko Petroleum ... and 34% on Yanzhou Coal Mining.

If you had followed all my recommendations since I launched Real Wealth Report 15 months ago, your gains would be \$15,207.29.* That's 80 times what it would cost you to subscribe for one year today!

*Total value of all open and closed recommendations including losers.

Naturally, not every recommendation can be a winner. And all investments carry the risk of loss. But oil and energy are the hottest markets on the planet right now, and for as far as the eye can see.

In each monthly issue of *Real Wealth*, I scour the world for precisely these kinds of stocks – plus new ways to make you money in water, copper, gold, natural gas, and other natural resources.

From China and India ... to Russia and Canada ... to the U.S. and South America ... I'll be digging up mining companies, oil and gas drillers, and agricultural producers – all to help you pull profits out of the ground.

I'll share with you my first-hand impressions, experiences, and analysis. All at my cost. Consider me your personal globe-trotting analyst – bringing you independent, unbiased, profit opportunities wherever I find them!

In every issue of *Real Wealth*, you'll get:

** Unambiguous, no-nonsense, totally unbiased "buy," "sell," and "hold" signals for every investment in your *Real Wealth* portfolio. I'll never leave you wondering what to do next.

** Breaking news on geopolitical developments that will have a dramatic impact on your investments. You can depend on *Real Wealth* to bring you crucial, up-to-the-minute intelligence from the world's hot spots on: the new Shanghai commodities exchange ... the Islamic dinar ... and how the war in the Middle East will affect the price of gold and other natural resources.

** You get answers to your most pressing questions about oil and gas ... water and water technologies ... silver, platinum, palladium, and gold.

** I help you grow your capital AND show you ways to preserve your hard-earned nest-egg. I name the investments to own NOW ... but I also tell you when to sell to grab windfall profits, or to cut any losses. I tell you about both sides of the equation – not just the great profit opportunities ... but also the grave dangers and pitfalls to avoid.

Special Discount Offer: Save 50% immediately!

Normally, a two-year membership in Real Wealth Report would be a bargain at the published price of just \$378.

However, by joining me now, you save HALF. Your two-year membership is only \$189. You get ...

→ Your FREE copy of my special report, "Triple-Digit Profits With World's Greatest Resource" – sent to you immediately, so that you can act on the recommendations right away. In this kind of market, even the slightest delay can make the difference between double- and triple-digit profits.

(continued ...)

➔ And, with your 2-year subscription, you'll also get three MORE special free bonus reports:

* "Chinese Oil Company Set to Become the 'Exxon/Mobil' of Asia" – China's demand for oil is exploding, and this company is already positioned to rake in billions – meeting the energy needs of 1.3 billion Chinese!

* "The ULTIMATE Natural Resource Stock" – This premier metals, mining, and energy company is poised to benefit from almost every area of energy and metal price growth worldwide! In the last five years, it's already made investors up to 241% richer – and you even get a healthy dividend!

* "Complete Gold Stock Profit Guide" – your complimentary copy of my new, definitive guide to gold stock investing. Everything you need to take your gold stock profit potential to new highs including my 25 favorite gold stocks ... the world's greatest gold mutual funds ... and my strategies for multiplying your gold stock profit potential by a factor of up to 100 to 1!

Each and every one of these reports is yours as my "thank you" for trying out my Real Wealth service! Plus, you get ...

- ➔ Two years – 24 big issues – of my Real Wealth Report ...
- ➔ Two years of 24-hour access to my Real Wealth website ...
- ➔ Two years of REAL WEALTH FLASH ALERTS – to take profits on stocks recommended in Real Wealth ... plus
- ➔ Two years of DAILY updates on oil, energy, natural resources and all the factors that impact them.

... and you get all this for just \$189! A mere TWENTY-SIX CENTS A DAY!

And please remember: You risk nothing by giving Real Wealth Report a try.

The gusher of profits is not waiting around for you. If you want to grab your share, you've got to jump on board right now.

The worldwide water crisis is not some future possibility. It is a dire reality, NOW!

Nor is the crisis going away any time soon. It's got VERY long legs. Indeed, by 2025, approximately 2.7 billion people will face a critical shortage of drinking water.

That's why smart investors aren't waiting around. They are already in position ... and already staking their claims to huge profits.

In my special report, Triple-Digit Profits With The World's Greatest Resource, I show you how you could do the same, starting immediately. I give you the name of the company. I tell you how much

to buy and what profit targets to aim for. I give you everything you need to ride this investment to explosive growth and profits.

It is the ONLY company in the world with the government-approved water technology to help solve a key aspect of China's water crisis.

And I'm looking for this stock to double within a year – and return a gain as high as 300% to 325% within the next 24 to 36 months.

That means a \$10,000 position in this stock could become \$42,500 in as little as 2 years ... and \$25,000 could grow to as much as a \$106,250 windfall in your portfolio.

For your FREE copy of my new special report, Triple-Digit Profits With The World's Greatest Resource ... three EXTRA free bonuses ... and a no-risk trial subscription to Real Wealth Report ... just complete and mail the form enclosed.

Or for faster service, call toll-free **800-604-3649**. Do it today, so you can enjoy early gains ... *before* a slew of new orders from China start driving the company's revenues and stock price higher.

Sincerely,

Larry Edelson, Editor-in-Chief
Real Wealth Report

P.S. Reply by phone today and, as an EXTRA free bonus, I will send you my new report, "The Next Three Big Oil Takeover Targets." In it, I name three companies with grossly undervalued oil reserves that are ripe for takeover, even with oil prices at current levels. Any further surge in oil, and there's no telling how high the majors will bid up their shares.

The first company has over 2.3 billion barrels of oil-equivalent reserves. They're all over the globe – in 12 different countries. Its balance sheet is a gem to behold. Hardly any long-term debt and plenty of cash on hand. The real clincher: Its oil is being valued at a mere \$6.57 a barrel, a meager 11 cents on the dollar.

The second company owns 2.1 billion barrels in oil and oil equivalent reserves. But its market cap – at \$25 billion – is also puny in comparison to the value of its reserves. At \$60 oil, I figure its reserves are worth \$126 billion. But, based on the company's share value, its oil is being valued at a mere \$8.57 per barrel, or just 14.3 cents on the dollar.

The third company is an international oil explorer and producer, with 1.2 billion barrels of oil reserves. Buy its shares and it's like buying oil for just 15 cents on the dollar.

All three are hot takeover candidates. That alone is incentive for you to buy – before a large company comes in and gobbles them up at much higher share prices. Pick up the phone immediately, and get my report on all three companies as an extra call-in bonus.
