

How to get rid of noisy cam followers and bearings by substituting quiet, non-flattening rollers instead

Metal cam followers are noisy, need frequent lubrication, and cause wear and tear on rails. Now you can replace your cam followers and bearings with plastic-on-metal Power-Core™ rollers ... the smooth-running, quiet, heavy-duty rollers that won't wear out your rail.

Only Power-Core “plastic-on-metal” rollers and cam followers give you all these advantages!

- Plastic tire – eliminates wear on rails, absorbs shock.
- Pre-lubricated bearings – no maintenance required.
- Long life – engineered to last 100 million cycles.
- Quiet operation – precision-machined, thermally installed tire has minimal run-out, reducing noise by 10 to 12 decibels.
- Proprietary load calculation – prevents flat development.
- Corrosion-resistant – with installed stainless steel bearing can be used in harsh and sub-zero environments.
