Passlogix Sign-On Platform

- **The emerging ESSO standard deployed by leading enterprises**
- **Extends identity management to the application and authentication device level**
- **No modifications to existing infrastructure or applications required**
- **Rapid-deployment password solutions generate quick time to value**

passlogix

v-go

>> **At last, a leading-edge technology company dedicated to providing enterprise solutions for all your sign-on and user authentication needs**

Most enterprises have no easy way – or no way at all -- of centrally managing user credentials and authentication.

That's because your enterprise has multiple independently developed, hosted, and managed applications... each with its own password requirement.

In the enterprise, passwords proliferate almost exponentially -- with no mechanism in place for tracking or managing them.

Result: endless user frustration... compromised security... and a high volume of password-related help desk calls.

That's where Passlogix can help -- **with the industryís first standard platform and customizable suite of sign-on solutions....**

And why hundreds of organizations count on Passlogix to help them centralize password administration and reduce password reset costs.

passlogix

>> Where enterprises turn to first for authentication solutions

With our patented v-GO Sign-on platform and comprehensive suite of enterprise single sign-on (ESSO) products, no one can deliver an ESSO solution for your enterprise better or faster than Passlogix:

• For the U.S. Postal Service, we deployed the largest ESSO implementation in the world, with more than 170,000 users and thousands of individual applications.

• Three of the largest U.S. government agencies, three of the largest oil and gas companies, two of the largest financial services firms, one of the worldís largest toy companies, and major corporations in health care, telecommunications, insurance, manufacturing, and many other industries use Passlogix ESSO technology.

• Passlogix partners with category-leading vendors including BMC Software, Entrust, Gemplus, IBM, Microsoft, Oracle, RSA Security, SAFLINK, Schlumberger, and Sun Microsystems.

Passlogix is a financially stable, rapidly growing software company specializing in sign on solutions.

passlogix

>> The emerging standard deployed by leading enterprises

Since 1996, Passlogix has led the field in developing enterprise solutions for user authentication, sign-on, and identity management.

We established our market-leading position with **v-GO Single Sign-On (v-GO SSO)...** Passlogix's industry-standard, client-based ESSO solution that recognizes and responds to logon and password change requests for Windows, Web, Telnet, Java, legacy, and host-based applications.

Today, Passlogix has expanded to a full suite of sign-on solutions, that comprise our popular **v-GO Sign-On Platform.**

With this platform, your authentication and other enterprise infrastructure can benefit from a reliable set of basic sign-on services and functionality. So you can implement new authentication, compliance, and security measures without affecting the user -- while significantly reducing the time, cost, and complexity of deploying these changes.

That's because our proven v-GO Sign-On Platform:

- Can be rapidly deployed with no changes to your existing infrastructure and no new hardware required ñ providing the flexibility to evolve over time.
- Eliminates the need for you to write scripts or code, or modify your applications in any way.
- Provides single sign-on capability for remote users ñ even when theyíre disconnected from the corporate network.
- Works with kiosks, biometrics, and all your authentication devices.

And when you install the v-GO Sign-On Platform, you gain a foundation upon which a complete enterprise identity management infrastructure can be either integrated or built, incorporating complementary technologies such as authentication management and user provisioning.

>> A single-source for all your sign-on needs

Passlogix offers you a full suite of solutions running on our v-GO platform. These products handle the entire sign-on requirement, enabling you to accelerate your identity management, compliance, and authentication initiatives.

All of our v-GO solutions are easy to configure, deploy, administer, and customize to meet your specific enterprise requirements. And that translates directly into more rapid implementation and a quick time to value.

passlogix®

Our products include:

- **v-GO SSO**... v-GO Single Sign-On enables users to log in once with a single password. Once users are logged in, whatever application they open is served the correct ID and password from v-GO SSO transparently and automatically. The system eliminates the need for users to remember and manage usernames and passwords for all their applications, while allowing administrators to centrally change and manage passwords.

- **v-GO SSPR**... if users forget their Windows password, they can regain access to their computer and the corporate network with v-GO Self-Service Password Reset. The software allows users to reset their password directly from the Windows logon prompt on their locked-out workstation, so that they can get to their applications within seconds... without having to call the help desk.

- **v-GO AM**... v-GO Authentication Manager allows organizations to use any combination of tokens, smart cards, biometrics, and passwords to control access to their applications, making it easier to implement strong authentication strategies... *without* locking themselves into specific vendors or technologies. The software integrates seamlessly, providing granular control over the level of authentication required to access specific applications.

- **v-GO SM**... v-GO Session Manager enables secure kiosk computing at any location within the enterprise. The system monitors and protects unattended kiosk sessions from unauthorized access. Inactive sessions are protected by a secure screen saver, permitting the next user can sign on to a new session while safely terminating the prior session.
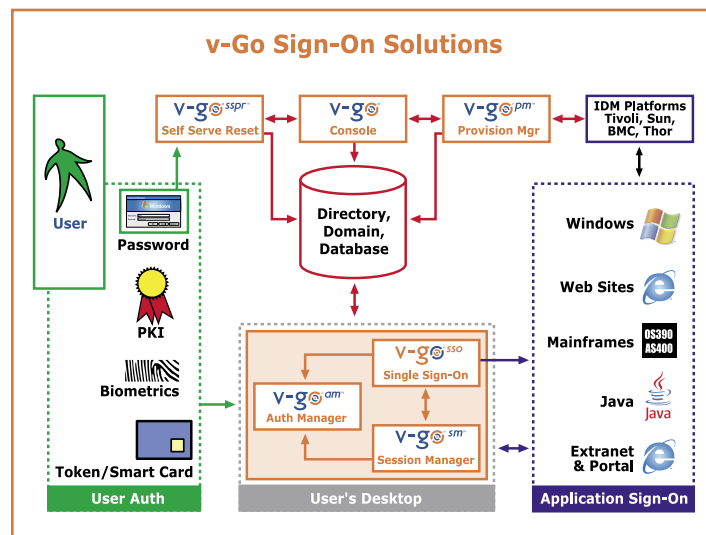

Only Passlogix provides an integrated family of sign-on solutions.

- **V-GO PM**... v-GO Provisioning Manager allows system administrators to directly distribute user credentials, including usernames and passwords. The administrator can add new credentials for new applications and new users, as well as modify or delete old credentials to v-GO SSO. When provisioning a new user on a network, the administrator can place the user's credentials directly into their v-GO SSO account, so the user never knows or touches them.

passlogix®

>> Passlogix: the enterprise sign-on specialists

Sure, there are other software vendors that offer some ESSO solutions and capabilities... but managing your passwords and user authentication is only a tiny part of their business.

At Passlogix, we do one thing and one thing only: help enterprises manage user authentication and passwords. But we do it better than anyone else in the industry... with unparalleled enterprise functionality, seamless integration with existing identity management and authentication systems, and extraordinary ease of deployment resulting in quick time to value.

By using virtually any LDAP directory, Active Directory, or database server as its user profile and credential repository– without touching your base schema -- Passlogix's ESSO platform frees you from the limitations of the "authentication silos" built into your various enterprise applications. The centralized repository stores all credential data, application configurations, and security policies.

Best of all, you can give each user a single authentication event, their Windows logon, to unlock the client-based agent and grant access to every application he or she uses. And you can make that password as simple or complex as you desire.

The v-GO SSO client agent intelligently recognizes and responds to application logon requests as they present themselves to users. By eliminating scripts, connectors, and wrappers, v-GO can work regardless of the various application versions that may be deployed or the network or application latency.

That's why enterprises of all sizes– from 100 users to more than 100,000 users– rely on Passlogix ESSO solutions to help them simplify secure access to enterprise applications and achieve their identity management objectives.

passlogix®

>> Only Passlogix sign-on solutions give you all these benefits

- ✔ **Rapid deployment**– extreme ease of implementation means your v-GO solution doesn't sit on the shelf, but instead gets installed and deployed quickly, immediately bringing you the cost savings and other benefits that centralized credential and authentication management offers.

- ✔ **Maximizes user productivity**– With Passlogix's v-GO SSO, users can sign on to all their applications with a single password– eliminating the need to remember or keep a record of multiple passwords for the different applications they use.

- ✔ **Reduces support costs**– The average password-related call to IT support costs $25, and Passlogix software can eliminate 95% or more of these calls... saving your enterprise thousands of dollars.

- ✔ **Securely stores and manages passwords**– v-GO Sign-On Platform gives you a single point of control for credential creation and administration, where passwords are stored and managed in a central location, and retrieved when needed in seconds.

- ✔ **Improves application security**– Passwords can be set at the maximum length and complexity permitted by each application, since the user needs to remember only one password to logon.

- ✔ **Works with the latest authentication devices**– Passlogix software can work with existing and new authentication technology including smart cards, biometrics, tokens, and proximity devices.

- ✔ **Protects passwords for mobile users**– Road warriors can cache their authentication credentials on their notebook PCs, giving them remote ESSO capability even when they are not connected to the network.

- ✔ **Simplifies administration**– administrative functions can be performed by any authorized central or delegated administrator from a single, simple console. You gain a single point of control for the creation, distribution, and maintenance of enterprise application passwords.

- ✔ **Monitors sign-on activity**– comprehensive reporting shows you who used passwords, what applications they accessed, where, and when. Application usage can also be tracked and reported.

- ✔ **Leverages your existing IT infrastructure**– v-GO eliminates the need for specialized server hardware, specific integration, custom scripting, or agents -- offering out-of-the-box support for the most common applications and platforms.

- ✔ **Grows as your business grows**– By leveraging your network directory infrastructure, Passlogix sign-on solutions can scale easily and reliably throughout an entire enterprise.

- ✔ **Enhances identity management**– Passlogix sign-on solutions can be integrated with leading identity management systems including IBM Tivoli Identity Manager, Sun Identity Manager, BMC Control-SA and Thor Xellerate, enabling administrators to transparently add credentials to each end user.

passlogix®

>> A tool for regulatory compliance

By controlling password access to enterprise applications, Passlogix software can help your enterprise achieve compliance with key regulations including Gramm Leach Bliley, Sarbanes-Oxley, and HIPAA.

These regulations require each application to have its own user ID and password. Auditors are now telling certain companies to remove or replace password synchronization products with a solution that uses a specific, unique user ID and password for each application. ESSO meets that requirement.

Implementing a sign-on solution does not automatically achieve full legal compliance. But it can mitigate regulatory and security compliance costs.

>> Enhancing identity management throughout your enterprise

Enterprises make significant investments in firewalls, anti-virus software, data encryption, and other computer security technologies. But passwords constitute an often overlooked aspect of enterprise security.

A password that can be found or figured out by an unauthorized user provides easy entry into the network and bypasses all other security measures. As for authorized users, forgetting or losing passwords is a too-common problem that adversely affects productivity -- and adds a costly and time-consuming administrative burden to IT support.

At Passlogix, our mission is to design, build, and implement sign-on solutions that meet all your enterprise needs for identity management, sign-on, and user authentication. Sign-on is all we do. And our customers tell us that nobody does it better.

Passlogix sign-on solutions are easy to administer and transparent to their users. What's more, Passlogix software can reduce password-related IT support costs to a bare minimum– while significantly enhancing network security. What more could you ask for from a sign-on vendor?

We're also committed to leading the field in innovating technologically advanced, highly reliable solutions for all your password and authentication requirements. That's why Passlogix reinvests 20 percent of its revenues back into R&D each and every year... and holds several U.S. and worldwide patents on its technologies.

passlogix®

>> Praise for Passlogix

"Passlogix was instrumental in helping the U.S. Postal Service (USPS) solves it most critical end user problem– forgotten passwords– and solve it quickly."
--Bob Otto, CTO, USPS

"v-GO SSO delivers a simple, fast experience for our medical staff, ensuring adoption of our portal and improving patient safety and care."
--Roland Garcia, CIO, Baptist Health

"v-GO SSO satisfies our requirements for a single login. Its out-of-the-box functionality enables us to easily and rapidly roll-out a complete solution without modifying our applications or infrastructure."
--Bob Davies, VP, Prudential Financial

"Excellent use of directory infrastructure and features confer many advantages... most application types can be catered for out-of-the-box... no need to change the majority of user experience, avoiding costs of retraining.
--Butler Group

"Passlogix leads the market in SSO-specific revenue and consistently earns high praise from its customers."
--Forrester Research
