Are you sick and tired of watching the news every night to see how much the Dow lost that day?

Has your portfolio taken such a hit lately that you don’t even want to go online to check how your stocks are doing – because you’re afraid of what you’ll see?

Are you worried about the U.S. economy – and your long-term financial security – in this unbelievably volatile and chaotic bear market?

More than at any time I’ve seen in my nearly two decades as an investor and trader, fear and anxiety are the dominant forces driving the market today.

That’s bad news if the trading system you use is designed strictly for a rational market – as so many of them seem to be.

You see, there are a lot of trading systems out there that work like gangbusters for a year … or maybe two.

Then, when market conditions change, they flounder … stop performing … and subscribers start losing money hand over fist.

Before long, you begin to panic … lose confidence in your trades … and abandon your trading plan as the –continued on page 3

IMPORTANT DISCLOSURES; PLEASE READ CAREFULLY
TRADING COMMODITY FUTURES, COMMODITY FUTURES OPTIONS, EQUITY OPTIONS, INDEX OPTIONS, EXCHANGE TRADED FUNDS (ETFs), ULTRA PROSHARES, AND LEVERAGED MUTUAL FUNDS MAY INVOLVE SUBSTANTIAL RISK OF LOSS. YOU MUST BE AWARE OF THE RISKS AND BE WILLING TO ACCEPT THEM IN ORDER TO INVEST IN THE FUTURES MARKETS. TRADING COMMODITY FUTURES IS NOT FOR EVERYONE. IF YOU DECIDE TO TRADE, DO NOT TRADE WITH MONEY THAT YOU CANNOT AFFORD TO LOSE. THE PAST PERFORMANCE OF ANY TRADING SYSTEM OR METHODOLOGY IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS.

ALL PERFORMANCE RESULTS ARE HYPOTHETICAL.
HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM.

ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THAT THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT. IN ADDITION, HYPOTHETICAL TRADING DOES NOT INVOLVE FINANCIAL RISK, AND NO HYPOTHETICAL TRADING RECORD CAN COMPLETELY ACCOUNT FOR THE IMPACT OF FINANCIAL RISK IN ACTUAL TRADING. FOR EXAMPLE, THE ABILITY TO WITHSTAND LOSSES OR ADHERE TO A PARTICULAR TRADING PROGRAM IN SPITE OF TRADING LOSSES ARE MATERIAL POINTS WHICH CAN ALSO ADVERSELY AFFECT ACTUAL TRADING RESULTS. THERE ARE NUMEROUS OTHER FACTORS RELATED TO THE MARKET IN GENERAL OR TO THE IMPLEMENTATION OF ANY SPECIFIC TRADING PROGRAM WHICH CANNOT BE FULLY ACCOUNTED FOR IN THE PREPARATION OF HYPOTHETICAL PERFORMANCE RESULTS AND ALL OF WHICH CAN ADVERSELY AFFECT ACTUAL TRADING RESULTS.

DOG DREAMS UNLIMITED INC. (DDUI), WHICH OWNS AND OPERATES THE AGILE TRADER, HAS HAD LITTLE OR NO EXPERIENCE IN TRADING ACTUAL ACCOUNTS FOR ITSELF OR FOR CUSTOMERS. BECAUSE THERE ARE NO ACTUAL TRADING RESULTS TO COMPARE TO THE HYPOTHETICAL RESULTS, CUSTOMERS SHOULD BE PARTICULARLY WARY OF PLACING UNDUE RELIANCE ON THESE HYPOTHETICAL PERFORMANCE RESULTS.

THE AGILE TRADER AND ALL INDIVIDUALS AFFILIATED WITH THE AGILE TRADER ASSUME NO RESPONSIBILITIES FOR YOUR TRADING AND INVESTMENT RESULTS.

AS A PUBLISHER OF A FINANCIAL NEWSLETTER OF GENERAL AND REGULAR CIRCULATION, THE AGILE TRADER CANNOT TENDER INDIVIDUAL INVESTMENT ADVICE ON THE SUITABILITY AND PERFORMANCE OF YOUR PORTFOLIO OR SPECIFIC INVESTMENTS. PLEASE CONSULT WITH YOUR REGISTERED INVESTMENT ADVISER FOR ADVICE TAILORED TO YOUR NEEDS AND OBJECTIVES.

IN MAKING ANY INVESTMENT DECISION, YOU WILL RELY SOLELY ON YOUR OWN REVIEW AND EXAMINATION OF THE FACTS AND THE RECORDS RELATING TO SUCH INVESTMENTS. PAST PERFORMANCE OF OUR RECOMMENDATIONS IS NOT AN INDICATION OF FUTURE PERFORMANCE. THE PUBLISHER SHALL HAVE NO LIABILITY OF WHATSOEVER NATURE IN RESPECT TO ANY CLAIMS, DAMAGES, LOSSES, OR EXPENSES ARISING OUT OF OR IN CONNECTION WITH THE USE OR RELIANCE BY YOU ON THE CONTENTS OF OUR WEB SITE, ANY PROMOTION, PUBLISHED MATERIAL, ALERT, OR UPDATE.

TRADING COMMODITY FUTURES INVOLVES SUBSTANTIAL RISK OF LOSS. DDUI AND ALL INDIVIDUALS AFFILIATED WITH DDUI ASSUME NO RESPONSIBILITIES FOR YOUR TRADING AND INVESTMENT RESULTS.
losses really mount.

But my readers and I have taken a different approach to trading the markets profitably during down markets and financial crises.

I call it the Dynamic Trading System (DTS), because unlike most systems, which are static, my DTS dynamically adapts to changing market conditions – bull, bear, or flat.

In plain English, that means we can potentially make money in both good markets – and bad.

You can trade virtually any market using DTS. My favorites are in S&P 500 and NASDAQ 100 instruments.

I trade in the SPY and QQQQ Exchange Traded Funds, the leveraged Rydex funds in these markets, in the E-Mini Futures markets for these indices, and in the SPY and QQQQ options markets.

While past results are not necessarily indicative of future results, say you had traded starting with $10,000 with my Dynamic Trading System in the SPX over the past 10 years. **Today your original investment could have grown to a hypothetical $254,000** (before commissions and fees).

That means you could, hypothetically, have racked up a staggering 2,440% in gross profits (as shown in the chart) – multiplying your money more than 24X in a single decade!*

During that same period, the S&P 500 was essentially flat. That means my Dynamic Trading System could have made you nearly a quarter of a million dollars richer than your friends and neighbors earning average market returns.

Even in bear markets, the Dynamic Trading System can be highly profitable. For instance, since March 2000, the Nasdaq 100 has lost 72% of its value.

But during that same period, you could have made a 2,690% gross profit trading the Dynamic Trading System on the Nasdaq 100 (NDX).

At that rate, you could have grown a $10,000 investment into a $269,000 gross-profit windfall – multiplying your money almost 27X in just 8 ½ years.**

“To calculate these results in our back test, start with $10,000. Invest 100% of the account in each trade, buying hypothetical shares of the SPX. (No fractional shares. Rounding down to maximum number of whole hypothetical SPX shares). No margin. No commission included. There are 268 round trips in 10 years, or just about 1 round trip every 2 weeks on average. These results, and all results herein, are hypothetical and subject to the disclaimer on page 2.

Measuring the market’s “inner strength”

From the early beginnings of our trading careers – amateur or professional, part-time or full-time – we are taught that price is the most accurate indicator for forecasting the market, right?

After all, many traders – and trading systems – look mostly at price charts.

So what’s wrong with that?

Nothing, except it means you are focusing on what has happened – and hoping price history can tell you what will happen.

But my “Dynamic Trading System” (DTS) goes way beyond price charts.

The Dynamic Trading System’s Oscillators provide us with insight into the sentiment of the masses:

“Since I subscribed to your service, I have had no losses – and profits of $120,000 in 50 days”

–Bob L.
Reading the market with cumulative volume

One key indicator our DTS Oscillators employ to evaluate the market’s internal strength is cumulative volume -- and how it moves in relation to the market index’s price.

Cumulative volume is the volume of stocks that are up on any given day … minus the volume of stocks that are down.

Here’s our rule of thumb to determine who’s in control of the market at any given time:

>> If the index moves up while the cumulative volume moves down, we have a bearish divergence. Should the index and the cumulative volume both break down through support together, we have a bearish confirmation.

>> On the other hand, if the cumulative volume line breaks up through resistance ahead of the index’s price, that’s a bullish divergence.

Another key ratio for measuring internal market strength is the put/call ratio.

The P/C ratio is the number of puts traded on the CBOE divided by the number of calls during a given session.

When the put/call ratio is high, it indicates to me that most of the money is focused on the downside risk.

Investors may be hedging, or options traders speculating. But whatever the case, they are, in my opinion, clearly focused on the downside:

But using this contrarian indicator is not quite as simple as taking a position against the crowd on any given day. There’s more to it than that. To make sense of all the market noise we see on this chart, we’ve developed techniques used in our DTS Oscillators to help clarify when sentiment has reached contrarian extremes – and identify important market lows.

Whether they are confident -- or (like now) badly shaken.

These unique DTS Oscillators help us measure the internal strength of the market: the appetites and inclinations of the buyers and sellers.

By taking numerous factors into consideration -- including price, volume, and market breadth, among others -- our DTS Oscillators show you who is in charge of the market – bulls or bears – a powerful indicator that many trading systems either ignore or under-emphasize.

By showing you who’s in charge -- buyers or (like now) sellers – the DTS Oscillators enable you to predict short-term price movement in the markets with superior accuracy … generating profits on both the long and short sides.

Outperformed the market nearly 3 to 1

O.K. How well did the Dynamic Trading System perform over the last couple of years?

In 2005 through 2007, actual unleveraged DTS trades for SPY and QQQQ produced a cumulative portfolio gain of 27.9%.

During that same period, the S&P 500 and NASDAQ averaged a total price gain of 9.90%:

Had you followed these DTS trades, you could have made almost 3X more money than your friends and neighbors earning broad market returns!

Of course, the Dynamic Trading System and its Oscillators are not infallible, and we do have some losing trades.

These include, by way of example, a 6.3% loss trading the RYTPX fund … and a 3.0% loss in June 2007 on the QQQQ.

Fortunately, the system losses tend to be small and infrequent relative to gains. The Dynamic Trading System tends to win more than it loses, with winning trades outnumbering losers by about 2 to 1.
While past results do not guarantee futures results, in some market environments, the DTS generates as many as 9 out of 10 winning trades!

Beat China at its own game

On February 27, 2007 a whole bunch of bad news came across the Pacific from Asia.

The Chinese stock market, which had been soaring, took a big hit. The Japanese yen was being shorted to provide liquidity.

Global investors were basically using this liquidity to buy everything else in the world. Self-perpetuating fears that a rising yen would cause further short-covering caused the yen to rally, causing further strengthening in the currency.

It was a classic run on an overcrowded trade, and, ultimately, the fallout from it caused asset classes of all stripes to drop hard and fast.

“Adam Oliensis is part of a crop of bright, young technical analysts who are taking the techniques developed by the pioneers, and adapting them to the current market in imaginative new ways. I find myself regularly in awe of the great insights that Adam comes up with in his work.”

–Tom McClellan, Editor, The McClellan Market Report

These results, and all results herein, are hypothetical and subject to the disclaimer on page 2.

287.43% annualized gain on a single trade

In June of 2007, the Dynamic Trading System Oscillators gave us a loud and clear “buy” signal for a Rydex trade.

(My new Dynamic Trading System Manual makes understanding and interpreting the DTS Oscillators a breeze. Order it for a 30-day risk-free preview today, and I’ll go one step better: I’ll personally interpret the DTS Oscillators for you, for a full month, absolutely free. Use the form on page 15 to get started).

The resultant Rydex trade generated a quick hypothetical 6.3% gain in just 8 days – equivalent to an annualized gain of 287.43% (without the benefit of compounding).
Traders Praise Adam Oliensis and the Dynamic Trading System

“Honest, no-hype analysis”
“Not only is the system consistently profitable, but I really appreciate your honest, level-headed, no-nonsense and no-hype analysis. This is clearly a very sound approach, and it’s the best I’ve seen in over 50 years in the market. I traded part-time during a 25-year NASA career (physicist and high-level executive), and full-time since retiring over 25 years ago—so I know what I’m talking about.”
—Michel B., Ph.D.

“I really have too much work going to watch the market so am hoping to take my small savings at this point and systematically add to your future auto-trade service. I know it won’t be perfect but I really do appreciate your system and its flexibility to get both sides.”
—Jeff

“The best investment I have made. It keeps on giving.”
—Ruth S.

“Your winning system improves my life in a tangible way! I cannot adequately express my gratitude.”
—Anne H.

“Over the years I’ve subscribed to at least 30 newsletters. Yours is the first service that has given consistent good advice yielding solid results. I’m more than satisfied and am certainly glad you don’t try to snow your readers with a lot of bells & whistles and BS.”
—Rick R.

“I am a broker at Morgan Stanley and your information is better than anything I get from Morgan Stanley. Keep up the great work.”
—R.

“As one of your faithful readers I’d like to wish you a healthy and prosperous New Year. Thank you for making all my ‘decisions’ for me!”
—Steve T.

“I really enjoy the way you explain the reasons for your positions using historical trends, charts, and the DTS System.”
—Mike B.

“Your comments on ‘trading temperament’ are very appropriate and reassuring. And the recent results prove how right you are. Again, thank you.”
—W.C.

“Excellent calls and a stellar track record”
“I want to commend you . . . for the professional, no-shenanigans way you run your operation. Not to mention thanks for your excellent calls and stellar track record. I see plenty of smoke-and-mirrors in other services similar to yours, but this definitely doesn’t apply to you.”
—Burt S.

“Adam Oliensis is one of the best readers of the technical tea leaves on the planet.”
—OTC Journal

Made $1,411 in a week and a half
“I went long PPH and shorted SMH. Your reasoning sounded good to me so I made my trades based on your recommended ratio of two to one. I made $407 on the PPH trade and $1,004 on SMH—not bad for a week and a half. Keep up the good work!”
—Clarence M.

“First off, I think your analysis and write-ups are the best anywhere I have seen...and they have changed a lot over the past 18-20 months...almost always for the better! I subscribed ...based on your track record. But if there was anything that I never expected it was that you would be more of an educator to me than a trade advisor. Lately (last two quarters) you have been much more correct than anybody.”
—Jim H.

“Great call today in telling us to wait before buying into this pop up in the first 45 minutes this morning. So, I waited, waited and waited and NEVER BOUGHT. (The market dropped throughout the rest of the day.) You saved me on this one. I would have bought into it had you not warned that this may well happen.”
—Vern S.
You can see this in the chart below. The DTS Short-Term Oscillator generated a sell signal at point E on February 21, '07 as the market topped out. By the time the 27th rolled around (point F) the market had suddenly become extremely oversold. In response, the system generated a signal to take a quick profit (more than 58 SPX points) and reverse its position without waiting for further confirmation of a reversal.

This "quick-strike" reversal signal ended up generating a trade that took some time to develop and was a bit tough on the nerves.

Ultimately, however, it ended up being quite productive: the system benefited from these circumstances and took a 35-point profit by closing its long position on March 22 at the close of trade (point G below),

Result: these two trades provided gross annualized gains of 245% and 40% respectively.

Quick SPX profits

On May 18, 2007, at point M in the chart below, the DTS Short-Term Oscillator turned down from an overbought condition. With no other indicators overriding this short-term signal, we sold the SPX short.

The SPX held up well for 3 sessions following this signal. In the meanwhile, 3 long upper wicks formed on the SPX candlesticks. Those long upper wicks suggest that the market was rejecting higher prices intraday, and could not close near its highs of those sessions.

Finally, on May 24 the SPX dropped about 15 points. Bulls were buying the dips and the market rallied to a new higher high during the following week.

At that point, as indicated at point M1 on the graph, the DTS Short-Term Oscillator found support at its zero (neutral) line, and the SPX was able to rally from this neutral condition.

Nevertheless, the Dynamic Trading System remained on its sell signal, extending enough elasticity and patience to wait for the decline that followed. Between June 4 and June 7, the SPX fell 49 points to about 1491.

The Dynamic Trading System, which had ridden out the rally into June 4, generated a signal to reverse June 7 (point N in the chart). Reason: the DTS Short-Term Oscillator had become sufficiently oversold to generate a signal. That signal told us to close bearish positions and enter bullish positions without waiting for confirmation of the reversal.

Bottom line: the DTS took a hypothetical 32-point
The Dynamic Trading System at a Glance...

What it is:

The Dynamic Trading System is a hypothetically-tested trading methodology that gives you a good idea of your statistical probabilities in trading. Using both price and market-internals data, DTS enables you to place trades that, based on historical testing, have an optimal probability of profitability.

How it works:

The DTS swing-trade signals, both long and short, are derived from a set of algorithms applied to the DTS Oscillators. The system was developed via extensive back-testing over the past 10 years of data in bull, bear, and flat markets, applied through seasonal and cyclical filters. Based upon hypothetical back-testing, the System has enjoyed a very profitable statistical edge in the past and we continue to tweak the System to learn from the markets in real time.

Technical tools:

The DTS looks at Bollinger Bands and MACD. Plus the VIX, the VXN, the Put/Call Ratios, the New Highs, New Lows, and historical Volatility. I’ve done extensive research on hundreds of indicators. But the DTS uses exclusive oscillators I derived myself.

The DTS oscillators are the most reliable indicators I know. I am not aware of any other indicators that have been as rigorously and successfully tested. I’m sure there are others out there. But these are the most reliable ones I know about at this time.

On July 16 (point Q on the chart), the DTS generated a signal to reverse: our Short-Term Oscillator turned down from a moderately overbought condition. The System took a hypothetical 43-point profit on our bullish position at the close on that date.

Do you see the advantages the DTS can bring to your trading?

With these rigorously tested, uncannily accurate chart patterns, oscillators, and other technical indicators, you can potentially trade with greater certainty.

You get tools to help you read the markets more accurately, get a better feel for them. And, you may be able to make quick gains on both sides of a price swing.
How the DTS “saved” 2008

The DTS Oscillators perform their job, and accurately predicted price moves in the markets, as long as we are in a “normal” market.

By normal, I mean a market in which market behavior tends to revert toward the mean (average behavior).

But in extreme conditions, such as a recession or market crash, fear overwhelms the markets.

When irrational fear rules the roost, the Dynamic Trading System’s “Meta Rules” guide us … and allow us to make appropriate trading decisions in times of extreme market behavior.

During the super-volatility of 2008, our Meta Rules told us it was time to take cash in our leveraged portfolios, and sit on the sidelines, until the market reverted to a more normal pattern.

The warning signs of a market headed out of control were generally in the DTS Oscillators (see chart below) … and once you review my DTS Manual, you may be able to read them with ease:

- The SPX was suffering an intense increase in volatility, which you can see in the expanded size of the candlestick bars on the chart.
- The DTS Mid-Term Oscillator languished in a severely oversold condition, representing sustained distribution of stocks among big players.
- The NH% Line * bounced up from an oversold level, crossed above the 20% line, and then came crashing down below the 20% level – an indication that the market was vulnerable to a severe sell-down from an already oversold condition.

*NH% is the New High Percent Line, which is the 5-day moving average of NYSE highs divided by the sum of new highs plus new lows.

Based on these DTS indications, we stopped issuing options trades in July 2008. By doing so, we avoided potentially huge losses that devastated the portfolios of other investors. In September, we suspended our futures trading as well.

These DTS Meta Rules are covered in detail in chapter 12 of my new Dynamic Trading System Manual. Read on to discover how you can get a preview copy to examine 100% risk-free for 30 days….

Get the DTS “big book of trading secrets”

For years, I kept the signals of my DTS system proprietary. The only way you could profit from these DTS trades was to subscribe to one of my high-priced trading services … and the number of members was strictly limited.

But many of my members asked for a “Subscriber’s Guide” to the Dynamic Trading System so they could better understand why I was recommending the trades I gave them.

Other traders who were kept out of my trading services because of space limitations or cost also desired to trade the DTS, and wanted to know if I would teach them to do it.

Since I don’t really have the time or desire to give options trading boot-camps during the weekend – and would have to charge around $5,000 a seat to justify the time and trouble if I did offer them ….
I undertook a massive project: writing a how-to guide … a complete Dynamic Trading System Manual revealing the system and its many secrets!

With a copy of my new Dynamic Trading System Manual in your hands, now YOU can master some of the world’s most powerful – and accurate – technical indicators, chart formations, and oscillators.

Signals that, over time, may dramatically increase your win/loss ratio in your favor … make you more confident in your trading … know when to enter and exit each trade … and help you see situations most other traders typically miss.

Including:

- Some of the most powerful tools on the planet for managing risk, timing your entry points, and knowing when to sell. Page 6.

- Best months of the year to maximize your trading profits (hint: it’s NOT when you’ve been told). Page 122.

- Accurately forecasting many market moves with the Moving Average Convergence Divergence (MACD). Page 63.

- Seeking to profit from “continuation patterns” – windows, gapping plays, and advancing white soldiers. See page 43.

- Measuring momentum with the Stochastic Oscillator (SO). Plus: 3 common stochastic signals and when to trade on each. Page 75.

- How to trade market support and resistance – scientifically and reasonably accurately, although there is risk of loss. Page 15.

You’ll also discover: rules and meta-rules – when to follow them, and when to deviate (p. 129) … what a “shooting star” can tell you about where the market is heading in the next few days (p. 38.) … the 3 charts every trader should be looking at – and what you can learn from each (p. 11) … spotting overbought and oversold markets using Bollinger Bands – once difficult, now can be easier (p. 69).

Plus:

- How a ruler and a pencil can show you overbought and oversold conditions on any stock chart. Page 51.

- What I believe are the most powerful indicators for determining whether bulls or bears are in control of the market. Page 21.

- In my opinion, the 3 most critical market internals to look at – and how to interpret each. Page 88.

- Attempting to predict SPX price movement with the under-employed “Disparity Indices.” Page 53.

- Determining options market sentiment using the volatility index and put/call ratio. Page 92.

- Is the current trend going to continue on its present course – or suddenly make a sharp reversal? Here’s the signal that can tell you. Page 22.
Hypothetically profit-testing these stochastics yielded 14 winning trades, 67% accuracy, and a 33% gain. Page 102.

In addition, I also cover the simple “Rate of Change” calculation showing you where the so-called “easy money” might be made in a move (p. 57) … is conventional trading wisdom always right? This story may shock the heck out of you (p. 108) …

… how to trade the gravestone doji – rickshaw man – dark cloud cover – necks – thrusting patterns – harami (p. 29) … the most common misconception about the Relative Strength Index – and what RSI really measures (p. 59) … how to read the Dynamic Trading System Oscillators (p. 51) … and much more.

**FREE Bonus Report!**

With many trading systems, you have to attend a weekend boot camp – or subscribe to a trading service – to profit from the system.

Now, with my newly published Dynamic Trading System Manual, you can trade this once-proprietary system … and unlock the market secrets it reveals … all in the comfort and privacy of your home or office.

But here’s an even better deal …

Order the DTS Manual today on a risk-free trial basis, and get a FREE Bonus Report: Drilling Down the Dynamic Trading System.

In this special report, I personally walk you through how we put together successful trades … and identify profit opportunities most other traders miss.

A large portfolio of sample trades, with charts fully annotated and explained in detail, help you become a pro at the Dynamic Trading System – guaranteed or your money back!

**A FREE $495 Gift for You!**

As I mentioned, I publish some very exclusive – and high-end – trading services based on the DTS.

The top-of-the-line of my trading advisories is my Agile Trader Platinum.
Bull Market Ahead?

The current economic crisis and market volatility won’t last forever. Nothing does.

Markets run in cycles. Right now, we’re in a down market cycle. So the next big shift will signal the start of a new bull market cycle.

When that happens, there’s no better tool in your trading arsenal than the Dynamic Trading System Oscillators for maximizing your profits in rising markets.

The Oscillators show you where the opportunities for quick gains are in every price swing before the markets start to move.

They also give you a clear picture of when to take a position … when to sell … and when to stay out altogether.

The current market lows represent smart buying opportunities for traders seeking options at bargain prices.

And according to the DTS, the time to position yourself for extreme profits on the long side may be right now….

The 100-day DTS Oscillator is equal to its lowest point during the 2002 bear market, showing the most oversold reading ever.

The equity put/call ratio is at its penultimate level of all time. Credit in NYSE margin accounts less margin shows the most available cash ever available to move into the markets!

And the DTS Oscillators and Meta Rules, all outlined in my new Dynamic Trading System Manual, can guide you … and alert you when it’s time to start buying options contracts on the major stock indices once again (which may be sooner than you think).
$20,000 in profits since the first of the year
“Your work has helped me book just under $20,000 in net profits trading the QQQ’s. I sure do pay serious attention to both your sentiment (dashboard) and general technical analysis. I have been trading for a while and, in my humble opinion, your commentary is some of the best, most timely analysis of which I have ever been the pleased recipient.”
--Jim G.

“Whoever came up with the idea for the dashboard, I think it is brilliant. It is the first example I have ever seen of the next generation of trading tools. Even Trade Station, which is quite advanced, has nothing like the dashboard. It is a refreshing new way of presenting market data.”
--Ruhnyium

Your cost is only $49 … about what you’d pay to take a friend to dinner at a local restaurant tonight.

The dinner will soon be digested and forgotten. But the Dynamic Trading System could have a positive, tangible effect on your life for years to come!

Best of all, you won’t pay even $49 for the System unless you agree that it’s the best investment in your trading education you’ve made this year.

That’s because I want you to …

... use it risk-free for one month!

That’s right.

When your copy of the Dynamic Trading System Manual arrives, examine it carefully.

Study the patterns and formulas. Begin looking for them on your charts. Start paper-trading them until you gain enough skill and confidence to trade DTS with real money. And then decide.

I believe you’ll love the Dynamic Trading System … apply many of these tools to improve your own trading … and want to keep the DTS Manual as part of your permanent trading library for years to come.

But if not … if you are not 100% satisfied with the Dynamic Trading System for any reason … or for no reason at all …

Simply return the Manual to us at any time within 30 days for a full and prompt refund.

Whatever you decide, the Free Special Report and any other materials received are yours to keep FREE – our way of saying “thanks” for giving the Dynamic Trading System a try.

That way, you risk nothing in purchasing the DTS Manual.

So what are you waiting for?

To order my Dynamic Trading System Manual on a no-risk 30-day trial basis, just call toll-free at 1-888-233-1431 now.

Or complete and return the form on page 15 today. You’ll be glad you did. I guarantee it – or your money back!

Sincerely,
Adam Oliensis, Creator
Dynamic Trading System

P.S. Remember, this is an honest-to-goodness RISK-FREE Trial Offer! If you are not 100% satisfied, just return your Dynamic Trading System manual within 30 days. We’ll refund your money right away … and say “thanks” for giving the Dynamic Trading System a try.
2 FREE Gifts – Just for You!

**FREE BONUS GIFT #1:**
*Drilling Down the DTS* (value: $29).

In this special report, I walk you through the system as we put together successful trades … and identify profit opportunities most other traders miss. A large portfolio of sample trades, with charts fully annotated and explained in detail, help you become a pro at the Dynamic Trading System this year. And it’s your free – gratis. You pay not a cent.

**FREE BONUS GIFT #2:**

**One Full Month of Agile Trader Platinum** (value: $495).

We publish an exclusive – and very expensive – online trading service based on the Dynamic Trading System called Agile Trader Platinum. In it, you get our recommended plays for all of the markets we trade with the system, including NASDAQ, QQQ, Rydex, and more.

The cost of this service is almost $6,000 a year. But when you order a no-risk preview copy of *the Dynamic Trading System Manual* today, you get – as a bonus gift – a full month of Agile Trader Platinum (a $495 value) absolutely FREE.

---

“I’ve learned more, made more money, and suffered fewer losses than ever before in about 30 years of investing. And I’ve barely scratched the surface of the intelligence available through your commentary.”

—Jim E., Fort Worth

“You’ve got the best comments I’ve seen from any site. And I’ve seen many, far too many for too long … but yours shows a very balanced mind in the battle tank.”

—Matt R.

$100,000 in trading profits

“I am very happy with the Agile Trader. I recovered over $100,000 from my subscription.”

—Leslie T.

“I’ve been trading for a year. Largely due to your guidance and philosophy, I’ve made more trading the last 3 months than I do at my day job….I love your service.”

—Kevin D.

“Adam, I am in love with your analysis!”

—Glenn F.

COMMODITY FUTURES TRADING INVOLVES SUBSTANTIAL RISK OF LOSS AND IS NOT FOR EVERYONE. PAST RESULTS ARE NOT NECESSARILY INDICATIVE OF FUTURE RESULTS. TESTIMONIALS ARE NOT INDICATIVE OF FUTURE SUCCESS AND HAVE NOT BEEN INDEPENDENTLY VERIFIED. HYPOTHETICAL RESULTS HAVE MANY INHERENT LIMITATIONS. PLEASE CAREFULLY READ THE FULL DISCLAIMER ON PAGE 2.

Risk-FREE Order Form

I will also get a full month of The Agile Trader Platinum, Adam Oliensis’s premium trading service (a $495 value), absolutely FREE.

If I am not 100% satisfied, I may return the Manual within 30 days for a prompt and full refund.

Whatever I decide, the FREE Special Report and all other bonus materials received are mine to keep – without cost or commitment of any kind.
